

Experiment – 1.1.1

Student Name: Yatharth Bhaskar

UID: 24IBD70014

Branch: AIT-CSE (Data Science)

Section/Group: 24BDS-4 NTPP (A)

Semester: 5th

Date of Performance: 08 July 2026

Subject: Full Stack-II

Subject Code: 24CSP-337

1. Aim:

To design and develop a dynamic post composer interface supporting multiple platforms with constraint validation..

2. Software Required:

- Node.js & npm
- React.js
- Code Editor (VS Code recommended)
- Browser (Chrome/Edge)

3. Objective:

- To understand multi-platform content handling
- To implement real-time validation mechanisms
- To design responsive and user-friendly UI components

4. Theory:

In modern social media management systems, a single post may be targeted for multiple platforms, each having its own constraints such as character limits, media rules, and formatting guidelines. This module focuses on building a flexible post composition interface that dynamically adapts to selected platforms. It ensures that user input adheres to platform-specific rules through real-time validation. The system enhances user experience by providing instant feedback such as character counters and validation messages. This forms a critical part of any content publishing pipeline in real-world applications

5. Procedure/Algorithm:

- Create a post composer component
- Add platform selection functionality
- Implement character count logic
- Add validation rules for each platform
- Display real-time feedback (warnings/errors)
- Ensure responsive UI design

6. Code:

```
1 <!doctype html>
2 <html lang="en">
3   <head>
4     <meta charset="UTF-8" />
5     <meta name="viewport" content="width=device-width, initial-scale=1.0" />
6     <title>Post Composer Studio</title>
7   </head>
8   <body>
9     <div id="root"></div>
10    <script type="module" src="/src/main.jsx"></script>
11  </body>
12 </html>
13
```

7. Output:

Post Composer Studio

Build platform-aware posts and manage drafts in one polished workflow.

8. Conclusion:

- Successfully designed and implemented a dynamic post composer interface for
- multiple social media platforms.
- Implemented platform-specific validation such as character limit checking and real-time feedback.
- Developed a responsive and user-friendly interface using React components.
- Improved user experience through instant validation messages and character counters.
- Gained practical knowledge of building modular and reusable frontend components.

9. Learning Outcomes:

- Understand the concept of multi-platform social media post management.
- Apply platform-specific validation rules during post creation.
- Develop dynamic interfaces with real-time input validation.
- Implement character counting and instant user feedback features.
- Ensure posts comply with platform-specific publishing requirements.
